Horse Minerals

The core mineral supply to your horse is from the forage which makes up the bulk of its diet. In the summer this is usually fresh grass, in the winter it will be hay or haylage. Nutrient supply is then topped up using additional feeds and specific mineral supplementation.

Forage minerals are affected by soil type. The north of Scotland is quite unique in its soil type due to the granite bed rock. Grassland management, plant species and seasonality also affect the mineral supply to your horse throughout the year. For example, forages in the Grampian area are typically low in Selenium, Cobalt and available Copper. Due to our latitude, lack of sunlight and short daylength in the winter months reduces your horse's own ability to produce Vitamin D. This exacerbates the low level of the major mineral Calcium in the soil.

Four key nutrient groups are included in Norvite Horse Supplements: Macro minerals, trace elements, vitamins and amino acids. Vital to the daily functioning of all animals a deficiency in supply can negatively affect the health, growth or performance of your horse. Norvite Supplements are blended to complement your horse's core diet.

Specific deficiency symptoms are not easy to define as many of the nutrients interact with one another and have multiple roles within the horse. Below optimum performance of your horse may be linked to a mild or sub-clinical deficiency.

Norvite has more than 30 years experience of formulating mineral supplements specific to the requirements of Scottish soils. Regular forage nutrient testing together with close work alongside local vets and research institutes over the years has resulted in the development of the Norvite Horse Range with products that can be applied to every situation. The result is simple, reliable nutrition to achieve optimal animal performance.

Which one is for your horse?

Norvite Everyday Supplement – formulated for all horses at rest and in light to moderate work. To be fed alongside forage, normal feed and access to fresh, clean water.

Norvite Equine Specialist Supplement – formulated for young stock, breeding mares & stallions, veterans and animals recuperating from illness or operation.

Norvite Pasture Balancer Block – for horses at grass or stabled receiving little or no feed alongside their forage. Contains pro-biotic as an aid to maintaining digestive health
